Inria, Autonomous intelligent machines team (MAIA), Nancy, France
Supervisor: François Charpillet, Directeur de recherche (Inria)

Project: *Cartography of a territory by a robot (CAROTTE)*, national joint project of the French National Research Agency (ANR) and the French General Directorate for Armament (DGA)

- Drew up a state-of-the-art and analysed existing multi-agent exploration algorithms. Developed a new multi-agent ant algorithm for graph exploration, using which agents are able to identify exploration completion and to return to a rendez-vous point (applicable in practice for 2D and 3D robotic exploration of structured environments).

Software R&D Intern Sept 2010 – Jan 2012
PSA Peugeot Citroën
Telematics Architecture and Software Specification team, Sochaux, France

- Participated in the development of a methodology for designing UML/SysML models of software architectures for vehicles. The elaborated target-generic model designs were then used for automatic code generation for specific target platforms.
- Developed and implemented additional networking functionalities for a Controller Area Network (CAN) driver, required for connecting real and simulated car components.
